The following outlines draft principles/characteristics to help guide the Evaluation Team when considering possible management measures. These guiding principles will be evaluated during the 2017-18 RAMP pilot, and may be further updated based on lessons learned by the Working Group and input from the fleet and others.

The Working Group supports thriving whale populations along the West Coast, and a thriving and profitable Dungeness crab fishery. Our charge is to:

- Provide guidance and recommendations to the California Dungeness crab fishing industry, including the DCTF, to avoid/minimize entanglements and identify measures or experiments that can be developed or implemented by the fishing community to address the entanglement issue;
- Collaboratively inform and guide the state of California (CDFW, OPC, Fish and Game Commission, and the Legislature) in addressing key information gaps and/or measures to reduce the risks of entanglements in Dungeness crab fishing gear; and
- Guide whale entanglement reduction efforts by establishing priorities for the Working Group, and help inform other entities seeking to address the issue of whale entanglements in California.

[Insert brief description about the RAMP, role of a RAF. Highlight that management measures toolbox developed to be proactive/responsive to times of elevated risk. Information gathering an important step to informing the RAF and MMT. In times where risk is not elevated, fleet encouraged to engage in “green” activities.]

Management Options/Measures

- The Working Group is working to identify and recommend management measures that can effectively reduce whale entanglements in CA Dungeness crab fishing gear.
- Management measures will be fact-based and science driven and will be updated as new information becomes available.
- Management measures will be scaleable and any application should be narrowly focused in geographic area and time frame. Management measures will be consistently applied and will be enforceable.
- Management measures will be adaptable and additional management measures may be included as identified by the Evaluation Team and reviewed and confirmed by the Core Team.
- Management measures will aim to minimize negative economic impacts to fishermen and avoid disproportionate impacts on a subset of the fleet. Where possible, mitigation options will be considered, including identifying alternative harvesting opportunities for impacted fishermen.
- Management measures will be evaluated and measured across a number of stages, including effectiveness of communication out to the fleet; level of understanding of the communication; and level of response to management measure.
- Once a management measure has been identified, a clear process for evaluating its implementation and identifying when/how fishermen are able to re-establish regular fishing practices in as short a timeframe as possible will be developed.
- Annual evaluation of the management options list will be conducted so the suite of options can be refined based on experiences and lessons learned. As appropriate, lessons learned will be shared with other CA fixed-gear fisheries for review and consideration.
